A Lab Technician position is available in the Klann Lab at the New York University Center for Neural Science. The technician will be responsible for maintaining a colony of knockout and transgenic mice, performing behavioral tests, and in assisting in related molecular biology experiments.

The specific duties of the Technician will include:

- Maintaining the mouse colony including:
  - Animal husbandry
  - Colony census and tracking
  - Genotyping
  - Communicating with the senior animal colony manager in the lab
- Performing behavioral test batteries
  - Performing the tests
  - Analyzing the data from the tests
  - Careful record keeping
  - Communicating results and plans with concerned lab members
- Assisting in related molecular biology experiments
  - Will work closely with other members of the laboratory as assigned

Required qualifications for the Technician position:

- BS or MS degree in Molecular Biology, Microbiology, Biochemistry or a related scientific discipline.
- 2-3 years full time experience in behavior, animal husbandry, and PCR-based genotyping.
- Effective oral and written communication, interpersonal, and organizational skills.
- Immediate start date preferred.

Interested candidates should send an email to ek65@nyu.edu, with the following:
- CV
- Cover letter, detailing experience in behavior, animal husbandry and molecular biology.
